1. A complex comprising, in admixture, a cationic polymer compound and an anionic active compound, characterised in that the polymer compound comprises a dendritic core having at least one dendron having n levels of dendritically linked trifunctional monomer units, cationic groups at at least 50% of the terminal branches of the at least one dendron, and an anchor moiety comprising at least two lipophilic C₆₋₂₁-alkyl, -alkenyl or -alkynyl groups covalently conjugated in the polymer compound.

Claims 2-23 are cancelled.
